ABHISHEK ANAND

Frontend Engineer | React.js · Next.js · TypeScript · JavaScript

Noida, India • +91-8839617601 • abhishek.anand.7601@gmail.com • LinkedIn • **Immediate Joiner**

PROFESSIONAL SUMMARY

Frontend engineer with 3.5+ years of experience building production React.js, Next.js, TypeScript and JavaScript applications for SaaS and enterprise products. Experienced in frontend architecture, reusable component systems, REST and GraphQL API integration, state management, performance optimization and real-time applications. Built a real-time monitoring dashboard for 500+ EV charging stations, an editable 10,000-cell data grid for Dentsu, and role-based access control for a multi-tenant SaaS platform. Cut redundant API calls by 60% with TanStack Query and moved Core Web Vitals from Poor to Good on an app serving 10,000+ monthly users. Mentored 3 junior developers and available to join immediately.

TECHNICAL SKILLS

Core: React.js, Next.js (SSR/SSG), TypeScript, JavaScript (ES6+), React Hooks, Redux Toolkit, Redux, Context API
Data & APIs: TanStack Query, REST APIs, GraphQL, WebSockets
Performance: Core Web Vitals, Lighthouse, Code Splitting, Lazy Loading, Memoization, List Windowing
UI: Material UI, Tailwind CSS, Bootstrap, HTML5, CSS3, Responsive & Cross-browser Design, Storybook, Reusable Component Libraries
Testing & Tools: Jest, React Testing Library, Git, GitHub, Webpack, Vite, Figma, JIRA

PROFESSIONAL EXPERIENCE

Independent Frontend Consultant | Client & Startup Projects **Feb 2026 – Present | Remote**

- Delivered responsive Next.js 14 (App Router) and React 18 web applications for early-stage SaaS clients and digital agencies under contract, turning Figma designs and PRDs into accessible, production-ready UIs.
- Built high-performance interactive dashboards utilizing TypeScript, Tailwind CSS, TanStack Query, and WebSockets; reduced client page-load latency by 45% and improved Core Web Vitals to 95+ Lighthouse scores.
- Designed and implemented an automated data ingestion and notification workflow using Playwright, Python, and Groq/Gemini LLM APIs, automating multi-source lead discovery with zero manual overhead.
- Integrated REST and GraphQL APIs with optimistic UI caching and resilient error boundaries, eliminating duplicate network roundtrips across multi-step user workflows.

Software Engineer | Samin TekMindz Aug 2025 – Jan 2026 | Noida

- Owned frontend development of a Next.js (SSR/SSG) SaaS application serving 10,000+ monthly active users, turning product requirements and Figma designs into responsive, cross-browser React features with product, design and backend teams.
- Built a shared library of 35+ reusable React components documented in Storybook; adopted across 3 teams, reducing feature delivery time by 28%.
- Integrated REST and GraphQL APIs with TanStack Query caching, cutting redundant server calls by 60% and improving page-load performance.
- Improved Google Core Web Vitals from Poor to Good across all metrics through code splitting, lazy loading, memoization and fixing React rendering bottlenecks.

CoolAnt — SaaS Project Management Platform
Tech: React.js, Next.js, TypeScript, JavaScript, Redux, TanStack Query, GraphQL, REST APIs, SSR/SSG, React Hooks

- Implemented role-based access control (RBAC) and dynamic routing for 1,000+ simultaneously live projects, with zero permission-boundary defects reported in production.
- Replaced 3 manual Excel reporting workflows with responsive drill-down dashboards for financial reporting.
- Built meeting scheduling, smart worksheet and project lifecycle modules for a centralized multi-tenant platform.

Sparke — Enterprise EV Charging Network Platform
Tech: React.js, JavaScript, Redux, WebSockets, REST APIs, Chart.js, Google Maps API, AWS S3, responsive UI, cross-browser development

- Built a real-time React dashboard monitoring 500+ EV charging stations with live status updates over WebSockets.
- Reduced dashboard load time by 32% (about 3.5s to 2.4s) using memoization and list windowing, verified with Lighthouse.
- Delivered consistent UI behavior across Chrome, Firefox, Safari and Edge with responsive, cross-browser components.

Frontend Developer | Successive Digital Dec 2021 – Jan 2025 | Pune

- Mentored 3 junior developers on React architecture, state management and code reviews; contributed frontend standards to the team engineering playbook.
- Built and maintained production React applications for enterprise logistics and digital marketing clients, covering component architecture, API integration and production support.
- Reduced UI defect count by 20% and eliminated about 30 manual QA runs per sprint with Jest and React Testing Library tests and structured peer reviews.

Plan Manager — Dentsu Enterprise Media Planning Tool
Tech: React.js, TypeScript, JavaScript, WebSockets, Redux, HandsOnTable, real-time synchronization, large data-grid rendering

- Built an Excel-like data grid rendering and editing 10,000+ cells per plan; debounced state management eliminated browser-freeze complaints from enterprise users.
- Implemented real-time multi-user sync with WebSockets, reducing stale-data errors by 30% and saving each media planner about 2 hours per plan cycle.
- Added sorting, filtering, copy-paste and cell-level validation, improving planner interaction speed by 40% on large datasets.

EDUCATION

B.Tech, Information Technology | Biju Patnaik University of Technology, Odisha 2016 – 2020
